1. PROFESSIONAL SUMMARY

A DETAIL-ORIENTED DESIGN ENGINEER AND FRONTEND ENGINEER WITH EXPERTISE IN CRAFTING PIXEL-PERFECT, INTUITIVE, AND HIGHLY RESPONSIVE WEB INTERFACES. ADVANCED PROFICIENCY IN REACT, [NEXT](#), ANGULAR, TYPESCRIPT, AND TAILWIND CSS, WITH A DEDICATED SPECIALISATION IN INTERACTION DESIGN USING GSAP AND FRAMER MOTION. PROVEN TRACK RECORD OF OPTIMISING FRONTEND ARCHITECTURE TO REDUCE LOAD TIME, REDUCE APPLICATION SIZE AND INCREASE APPLICATION SPEED, SEAMLESSLY BRIDGING THE GAP BETWEEN HIGH-FIDELITY DESIGN SYSTEMS AND PRODUCTION-READY, SCALABLE ENGINEERING.

2. SKILLS

PROGRAMMING LANGUAGE: HTML, CSS, JAVASCRIPT, TYPESCRIPT, BASH,
LIBRARIES/Frameworks: REACT, [NEXT.JS](#), ANGULAR, TAILWIND, BOOTSTRAP, FRAMER-MOTION, REACT-ROUTER, WEB3.JS, THIRD-WEB

DATASTORES: MONGODB, FIREBASE, SUPABASE
SOFT SKILLS: STRONG INTERPERSONAL RELATIONSHIP, EFFECTIVE TEAM PLAYER, FAST-PACED LEARNER, PRAGMATIC ATTENTION TO DETAIL

3. WORK EXPERIENCE

XCLAIM LABS,
Frontend Engineer

Lagos, Nigeria
2025-2026

- Implemented responsive and intuitive UI designs on **Triple7Events** with **React**, **TS**, and **Tailwind CSS** to enhance seamless overall user experience and interaction, **maintaining a strict 1:1 design-to-code fidelity** and boosting cross-platform visual consistency.
- Integrated backend APIs using **Axios** to deliver dynamic data and features while also **reducing initial load time by 35%** and cutting redundant server requests.
- Developed, optimised and managed user authentication flow, improving app security, protecting user data, and managing user sessions while **decreasing user drop-off at login by 18%** through frictionless error handling and smooth, animated, visually appealing micro-interactions.
- Integrated a secure checkout flow**, utilising lazy-loaded payment modals and optimised state tracking to achieve a **24% faster transaction completion time** for users.
- Collaborated with team members** to optimise frontend performance and ensure design consistency across the application, implementing code-splitting and asset compression that **raised Google Lighthouse performance scores by 22 points**.

AIDOTHUB,
Technical Assistant

Nigeria
2024-2025

- Employed the use of AI design tools to build UI components using **Next.js/TypeScript** and **Tailwind CSS**. This **reduced development time by 70%**.
- Audited and streamlined** AI-powered feature deployment, **implementing automation** tweaks that **reduced feature turnaround times by 15%**.
- Developed and optimised Python scripts** for data processing pipelines, accelerating the automated ingestion and execution of AI agent workflows.
- Authored comprehensive technical documentation and deep-dive articles** on AI integration methodologies, **increasing team technical clarity** and reducing onboarding times for new frontend contributors.

- Developed a **high-performance web3 gaming system** using **JavaScript** and **React**, deployed on the **Abstract Network**, combining engaging gameplay with decentralised technology while achieving a fluid, gaming-grade **60fps UI rendering speed** through optimised state management
- Designed and implemented a **real-time leaderboard system** for tracking player scores and rankings by leveraging optimised WebSocket connections, **reducing interface lag and state-re-rendering overhead by 40%** during peak player traffic while still enhancing competitiveness and user engagement.
- Integrated **smart contract interactions** on the frontend using Web3 libraries to manage game logic and player assets securely.
- Identified and mitigated potential **vulnerabilities and security risks**, preventing exploits and ensuring game integrity against hacks.
- Collaborated with blockchain engineers and UI/UX designers to deliver a seamless and secure Web3 gaming experience, resulting in a **15% boost in user retention** due to seamless wallet onboarding.

4. PERSONAL PROJECTS

MONIDESK,

React, Typescript, TailwindCSS

E-COMMERCE

2025-2026

A responsive SPA for a comprehensive business operations platform using React 18, TypeScript, and Vite. Developed 7+ feature modules, including dashboard analytics, inventory management, invoicing, order/shipping tracking, and expense tracking.

Implemented a reusable component library (modals, forms, pagination, image uploads via Cloudinary), route-based code splitting with React.lazy/Suspense, and protected route authentication. Integrated RESTful APIs using Axios with TanStack React Query for server-state management and built type-safe forms with React Hook Form + Zod validation. Styled with Tailwind CSS and added motion with Framer Motion. Delivered a public-facing shopfront with dynamic product pages alongside the admin dashboard.

CRAVESEAT, (MOBILE ONLY)

React, Typescript, Tailwind CSS, Framer-Motion

SOCIAL, FOOD

2025-2026

A social commerce platform using Next.js 14, TypeScript, and Tailwind CSS, enabling users to post, browse, and fulfil product "cravings" within a community-driven feed. Implemented authentication flows (sign-up, login, email verification, password recovery) with NextAuth.js and cookie-based JWT token management. Built a social feed with craving cards featuring like, bookmark, and comment interactions; category-based browsing (restaurants, supermarkets, pharmacies, and local markets); and user profile management with image uploads via Cloudinary. Managed global user state through React Context with localStorage persistence and integrated RESTful APIs using Axios with request interceptors for automatic auth headers. Deployed on Vercel with performance monitoring via Vercel Speed Insights.

5. PUBLISHED ARTICLES

[A New Era in Tech \(Working with AI\)](#) – I recently wrote an article inspired by a conversation with a senior developer at Microsoft about the future of AI in software engineering. It breaks down how I leverage AI tools—not as a shortcut, but as a productivity multiplier to build and ship production-ready applications 10x faster

[Handling and Managing Databases with Supabase](#) – When building a recent Web3 gaming project, I ran into a common architectural bottleneck: handling real-time data persistence without a heavy backend layer. I wrote a technical guide documenting how I used Supabase with React and TypeScript to solve this.
